

Holbeach Bank Academy Calculation Policy

October 2024- review September 2025

At Holbeach Bank Academy we believe that mathematics is a vital tool to be used in everyday life, critical to Science, technology and engineering and necessary for economic well-being. Therefore, our intent is to develop each child's ability to master the skills of calculating and to reason and to problem-solve, we ensure children understand the world around them, extending their cultural capital.

This policy gives an outline of the documents that form the foundations of the teaching and learning of calculation throughout mathematics throughout the Academy. To support our curriculum framework, we follow White Rose Maths Hub schemes of learning to ensure a continuing development of number skills and calculation strategies. This adopts a small-step approach to mastery and progression.

The White Rose calculation policy documents the progression of calculation knowledge, skills and approaches across EYFS to Year 6 are identified and illustrated with examples of sentence stems, questions, resources and representations.

The documents mentioned have been reviewed by the Maths Team to ensure they are relevant and current to both our Academy and the curriculum.
